A complete and well-balanced introduction to modern experimental design. Using current research and discussion of the topic along with clear applications, Modern Experimental Design highlights the guiding role of statistical principles in experimental design construction. This text can serve as both an applied introduction as well as a concise review of the essential types of experimental designs and their applications.

INTRODUCTION Thermal radiation is emitted by heated objects. At the beginning of the 20th century, there was a large understanding of the fact that heating a solid object resulted into vibrations of its atoms and molecules. As Isaac Newton explained in Opticks in 1704: "Do not all fix'd

Blackbody Radiation References INTRODUCTION

In his discourse on scientific method, An Introduction to the Study of Experimental Medicine (1865), he described what makes a scientific theory good and what makes a scientist a true discoverer. Unlike many scientific writers of his time, Bernard wrote about his own experiments and thoughts, and used the first person.
