'Car Park Designers' Handbook' looks at multi-storey car parks as being utilitarian constructions. The authors do not see their design as being a finite art but as a compromise between the motorist's spatial desires and the practical need to achieve economy of construction.

Summary: This book intends to help practising engineers, designers, architects, local authorities, parking consultants and operators to create car parks which not only meet the spatial needs of motorists, but achieve economy of construction, durability of structure and effective use of the site area.

This book discusses safety in the public space of city centres and, thus, in the public realm. It is also concerned with public order and disorder and with those crimes which affect people s perceptions of safety in - and their use - of city centres. The various chapters show how crime, and especially fear of crime, could be reduced and how the centres of towns and cities might be reclaimed, made safer and more liveable.

This book is a study of design initiatives and policies in five US West Coast cities OCo Seattle, Portland, San Francisco, Irvine and San Diego

OCO all of which have had particularly interesting experience of relevance to urban design practice in Britain and other countries."

Filling a conspicuous gap in the recent literature, this book covers the internationalization of retailing, its impact on the urban region, the planning implications of retail change and social issues associated with all these developments.

How well have architects succeeded in building housing and what lessons can be learned from their triumphs and failures? The Housing Design Handbook will give you a complete understanding of what makes successful housing design. Through the analysis of work by Levitt Bernstein and a wide range of other UK practices, it illustrates good design principles and accumulates a wealth of knowledge in a readily accessible format for the first time. Written by a recognised authority in the field, the book provides: a range of cases to illustrate the way that different issues in the design of housing have been approached and with what degree of success a review of the place of housing as the most significant built form in the urban landscape an understanding of the importance of achieving a sense of place as the bedrock of social continuity a discussion of how flexibility might be achieved in order to accommodate future changes in housing need, if wholesale demolition and replacement is to be avoided more recent examples which explore why certain social groupings are more resistant to design innovation than others and why there has been such an architectural breakthrough in market led, higher density urban living. David Levitt examines the ideas behind the schemes and assesses how successful and sustainable those ideas have proved, making this an essential reference for professionals and students practicing and studying the design and commissioning of housing.

Laboratory Design Guide 3rd edition is a complete guide to the complex process of laboratory design and construction. Revised throughout for this new edition, the book contains a brand new chapter on the role of the computer, covering topics such as the virtual experiment, hot desking, virtual buildings and computer-generated space relationship diagrams.
