In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This briefer, streamlined version of Don and Sandra Hockenbury's acclaimed text, *Psychology, Second Edition*, warmly invites students to explore the science that speaks most directly to their everyday lives. Using a narrative rich with engaging anecdotes and real-life stories--often drawn from the authors' own lives and experiences--*Discovering Psychology* helps to clarify abstract concepts and psychological principles. With its smart pedagogy, attractive design and state-of-the-classroom media and supplements package, there is no text better equipped for introducing students to the science that speaks most directly to their everyday lives.
