**How can I adapt to life at an English speaking university? How can I get good grades?** **This book unravels the background and culture of English speaking universities. It explains how you will be expected to learn and study in universities in English speaking countries, and how you can develop your skills to excel as an independent learner. While it is important to understand how to undertake academic tasks like referencing, essay-writing and presenting information, it is also useful to be aware as to why the university requires you to do them. Each section includes the approaches, methods and applied exercises that will help you to understand and develop your skills. Reflective exercises as well as group tasks are also included to help you develop the study skills that are necessary for successful completion of a course. You are also encouraged to keep a copy of each completed task (in a portfolio) in order to demonstrate the skills you have learned to prospective employers. Getting Ahead as an International Student is designed for international students studying at any level - foundation level, undergraduate or postgraduate - and using any mode of study including distance-learning.**

**Wilfrid Sellars was and remains one of the most prominent and important twentieth-century philosophers: his writings played a key role in shaping the philosophical agenda in the English-speaking world during the second half of the 20th century, and they remain an active focus of intense critical attention and lively discussion. Jay Rosenberg studied under Sellars in the early 1960s, was continuously engaged with his work for over forty years, and was widely regarded both as its foremost expositor and as one of Sellars' trustest disciples. This was the last book that Rosenberg completed before his death at the age of only sixty-five. In it he gathers previously published studies of the central elements and implications of Sellars' philosophy, along with three new essays that further highlight and articulate the significance of his work, both historically and with respect to contemporary debates.**

**Chronic Non-Communicable Diseases (NCDs) are still widely perceived as diseases of affluence and not therefore public health priorities for low and middle income (developing) countries. This book focuses on chronic non communicable diseases (NCDs) in Low Middle Income Countries (LMIC). Currently, NCDs appear to be permeating the globe, with an increasing trend in LMIC. The increasing prevalence of NCDs in these countries is attributed to rapid urbanisation, population ageing, globalisation and industrialisation, all of which result in marked changes in patterns of consumption of food and alcohol, increased tobacco use and sedentary lifestyles, high levels of stress and low levels of physical activity. The burden of NCDs is likely to increase tremendously over the coming decades unless there is appropriate action taken to address the risk factors.**

**"...profoundly moving..." -Publishers Weekly** **Nelson Mandela ’ s two great-grandchildren ask their grandmother, Mandela ’ s youngest daughter, 15 questions about their grandad – the global icon of peace and forgiveness who spent 27 years in prison. They learn that he was a freedom fighter who put down his weapons for the sake of peace, and who then became the President of South Africa and a Nobel Peace Prize-winner, and realise that they can continue his legacy in the world today. Seen through a child ’ s perspective, and authored jointly by Nelson Mandela's great-grandchildren and daughter, this amazing story is told as never before to celebrate what would have been Nelson's Mandela 100th birthday.**

**"How to Write a Thesis can be read with profit by anyone who writes professionally, whether proposals, reports, monographs or a thesis. It is oriented to someone writing a PhD thesis, but has a lot to say about writing in general. It deals with the process of writing rather than detailed content, and is applicable regardless of discipline" SRA** **"This is the book that all PhD supervisors and their students have been waiting for: the first comprehensive overview of the many different writing practices, and processes, involved in the production of a doctoral thesis. Crammed full of explanations, shortcuts and tips, this book demystifies academic writing in one fell swoop. Everyone who reads it will be massively enabled as a writer." Professor Lynne Pearce, Associate Dean for Postgraduate Teaching, University of Lancaster** **"Rowena Murray's down-to-earth approach both recognises and relieves some of the agony of writing a PhD. The advice in this book is both practical and motivational; sometimes it's 'PhD-saving' too. By using Rowena Murray's techniques of regular snacking, instead of occasional bingeing, I managed to rescue my PhD from near-death at a time of work overload."** **Christine Sinclair, Part-time PhD student and lecturer in Educational Development, University of Paisley** **This book evolved from fifteen years' experience of teaching thesis writing. The contents have been tried and tested with postgraduates and academics. Early chapters explore the ambiguities and subtleties of thesis writing in detail. Later chapters are more compact, listing steps in the writing process. All chapters provide examples to illustrate techniques and activities to progress writing.**

**Motivation is a reason or set of reasons for engaging in a particular behaviour, especially human behaviour as studied in psychology and neuropsychology. The reasons may include basic needs (e.g., food, water, shelter) or an object, goal, state of being, or ideal that is desirable, which may or may not be viewed as "positive", such as seeking a state of being in which pain is absent. The motivation for a behaviour may also be attributed to less-apparent reasons such as altruism or morality.**

**This is a story which will make your heart sing - a story for all the family to read together. Young Judy discovers an unexpected package in her grandfather's old study. She has never met her grandfather (Poppy) as he died before she was born, but Judy is the one to unearth the puzzle which Poppy left for his family. To find the treasure which Poppy left, the family must first solve every riddle which he wrote on a beautiful scroll, and carefully wrapped in a rich purple velvet bag. Unless they solve the puzzles, they won't find the treasure. See if you can solve the puzzles before the family does. What has Poppy left them as an inheritance? Have fun with the story and enjoy the Omega Prize at the end.**

**Jay Rosenberg introduces Immanuel Kant's masterwork, the Critique of Pure Reason, from a 'relaxed' problem-oriented perspective which treats Kant as an especially insightful practising philosopher, from whom we still have much to learn, intelligently and creatively responding to significant questions that transcend his work's historical setting. Rosenberg's main project is to command a clear view of how Kant understands various perennial problems, how he attempts to resolve them, and to what extent he succeeds. The constructive portions of the First Critique - the Aesthetic and Analytic - are explored in detail; the Paralogsims and Antinomies more briefly. At the same time the book is an introduction to the challenges of reading the text of Kant's work and, to that end, selectively adopts a more rigorous historical and exegetical stance. Accessing Kant will be an invaluable resource for advanced students and for any scholar seeking Rosenberg's own distinctive insights into Kant's work.**

**Rapid advance have been made in the last decade in the quality control procedures and techniques, most of the existing books try to cover specific techniques with all of their details. The aim of this book is to demonstrate quality control processes in a variety of areas, ranging from pharmaceutical and medical fields to construction engineering and data quality. A wide range of techniques and procedures have been covered.**

**Science and Metaphysics** contains Sellars' John Locke Lectures. Besides considerable attention to doctrines of Kant's, Sellars presents "in systematic form the views I have developed and modified in paper after paper over the past twenty years."
