Higher-speed optics (above 25Gb/s) will also be needed in 5G networks Over the past 12-18 months, LightCounting has heard repeatedly about mobile operators

File Type PDF U S Front

requesting optical transceivers with speeds of 50, 100, and even 400 Gb/s for 'fronthaul' or 'backhaul'. Why such high speeds would be needed has been a real puzzle to figure out.

~~Mobile fronthaul in the 5G era | OFC~~

File Type PDF U S Front

LTE is a major change in the evolution of mobile network

architectures from two key aspects.

Firstly, LTE represents the final stage in the evolution from circuit/packet hybrid networks to a fully IP-based packet network,

File Type PDF U S Front

and secondly LTE also transitions from the legacy hierarchical network architecture to a flat and distributed architecture thanks to the incorporation of the RNC in the eNodeB.
