Yeah, 32/34 dmtl is way too big and unsuitable for a 1litre. You probably want a single choke Weber TLA (autochoke) or TLM (manualchoke). Both very 'subtle' as used on some Polos already. Other more challenging options are 34ICH or 30DMTR or a DCD with small chokes.

That's why Land Rover used the Weber 32/34 DMTL carburettor on the 2.25L engines from 1983 on. However the Weber 32/34 DMTL is out of production and can be hard to find. The currently available "universal fit" Weber 32/36 DGV is not the same as the DMTL that Land Rover used.

After the Second World War many American military vehicles become surplus stock and soon found their way into the hands of farmers and land owners across Great Britain. The subsequent heavy use and the real possibility of difficulties obtaining spares led Maurice Wilks, the Rover Car Company Chief Engineer, to design and build a replacement. Not only would the new Land Rover fill a gap in Rover 's portfolio, but also bring in much needed post-war money. Intended as a stop gap, the Land Rover would cease production almost 68 years later, after a production run that had produced over two million vehicles. During that time it would transform how the military saw and used motor transport. From utilitarian General Service truck to cutting-edge weapon 's platform the Land Rover would prove its worth time and again. This latest LandCraft title looks at the design and development of the Land Rover as well as the military specific variants designed and built, including the famous SAS Pink Panther, the nimble Light Weight and powerful Forward Control gun tractor. The title will also look at those key conversions that took place on standard Land Rovers throughout the duration of its life span. From the humble beings of the box like Series 1 to the formidable firepower and pace of the WOLF WMIK, the Land Rover was a constantly improved military vehicle. Through numerous trials, lessons learned and operational requirements the Land Rover was a vehicle that grew with the times. This LandCraft title removes some of the mystique that surrounds the myriad versions and how the Land Rover developed. It also includes the story of the design and development of the exclusively military Light Weight and Forward Control versions. It also charts how the Land Rover became a virtual barometer for the technological and engineering developments that have occurred over the past 70 years. It demonstrates how the Land Rover 's flexibility to change was its core strength. How the innovation of Rover and military mechanical engineers created a series of unbeatable military trucks. This section also looks at the smaller, important developments and variations in design which showed how adaptable the Land Rover really was. From specialist signals line layers to first responder fire and rescue vehicles, to the unit- and theater-led changes, the Land Rover was a vehicle that took all in its stride, proving its versatility. For the modeler there is nothing more important than the little things and this image-rich section of LandCraft 's Land Rover title delivers the goods. Filled with crisp images, that chart the Land Rovers development, combined with detailed accompanying text, forms an enviable visual guide for the enthusiast and modeller alike.

This volume focuses on research and practical issues connected with mortars on historic structures. The book is divided into four sections: Characterisation of Historic Mortars, Repair Mortars and Design Issues, Experimental Research into Properties of Repair Mortars, and Assessment and Testing. The papers present the latest work of researchers in their field. The individual contributions were selected from the contributions to the 2nd Historic Mortars Conference, which took place in Prague, September, 22-24, 2010. All papers were reviewed and improved as necessary before publication. This peer review process by the editors resulted in the 34 individual contributions included in here. One extra paper reviewing and summarising State-of-the-Art knowledge covered by this publication was added as a starting and navigational point for the reader. The editors believe that having these papers in print is important and they hope that it will stimulate further research into historic mortars and related subjects.

This volume contains papers presented at the Second Symposium on Ordered Fluids and Liquid Crystals held at the 158th National Meeting of the American Chemical Society, New York, Sep tember, 1969. The Symposium was sponsored by the Division of Colloid and Surface Chemistry. The proceedings for the first symposium on this subject were published by the American Chemical Society in the Advances in Chemistry Series. In the preface to the volume for the first meet ing held four years ago, we noted that research on liquid crystals had gone through tremendous fluctuations, with peaks of activity around 1900 and again in the early 1930's. The present period of high activity which started about 1960 has continued to exhibit acceleration. The reason for the persistent growth in the field is due to the increasing recognition of the important role played by liquid crystals in both biological systems and in items of commerce as diverse as detergents and electronic components. Addi tionally, more powerful and sophisticated instrumentation is pro viding a basis for understanding the properties of the liquid crystalline state as well as yielding inc-s-ve tests for the theories of mesophase structure which are only now reaching astate of maturity. Computational Physics is designed to provide direct experience in the computer modeling of physical systems. Its scope includes the essential numerical techniques needed to "do physics" on a computer. Each of these is developed heuristically in the text, with the aid of simple mathematical illustrations. However, the real value of the book is in the eight Examples and Projects, where the reader is guided in applying these techniques to substantial problems in classical, quantum, or statistical mechanics. These problems have been chosen to enrich the standard physics curriculum at the advanced undergraduate or beginning graduate level. The book will also be useful to physicists, engineers, and chemists interested in computer modeling and numerical techniques. Although the user-friendly and fully documented programs are written in FORTRAN, a casual familiarity with any other high-level language, such as BASIC, PASCAL, or C, is sufficient. The codes in BASIC and FORTRAN are available on the web at <http://www.computationalphysics.info> (Please follow the link at the bottom of the page). They are available in zip format, which can be expanded on UNIX, Window, and Mac systems with the proper software. The codes are suitable for use (with minor changes) on any machine with a FORTRAN-77 compatible compiler or BASIC compiler. The FORTRAN graphics codes are available as well. However, as they were originally written to run on the VAX, major modifications must be made to make them run on other machines.

The definitive DIY manual on automotive carburettors. Covers theory, specifications, fault diagnosis, repairs and service adjustments on the following carburettors: Ford Motorcraft 1V and Variable Venturi (VV) Pierburg 1B1, 1B3, 2B5, 2B6, 2B7, 2BE, 2E2 and 2E3 Pierburg (Solex) PDSI and PIC-7 Solex BIS, EEIT, PBISA, SEIA, Z1, Z10 and Z11 Weber DARA, DFT, DFTH, DFTM, DGA V, DIR, DMTE, DMTL, DRT, DRTC, IBSH, ICEV, ICH, ICT, TL, TLA, TLDE, TLDR, TLDM, TLF, TLM and TLP

The book is a compilation of high-quality scientific papers presented at the 3rd International Conference on Computer & Communication Technologies (IC3T 2016). The individual papers address cutting-edge technologies and applications of soft computing, artificial intelligence and communication. In addition, a variety of further topics are discussed, which include data mining, machine intelligence, fuzzy computing, sensor networks, signal and image processing, human-computer interaction, web intelligence, etc. As such, it offers readers a valuable and unique resource.
